

Regional Approaches to Rural Economic Development

NATIONAL ASSOCIATION OF DEVELOPMENT ORGANIZATIONS

REGIONAL STRATEGIES. PARTNERSHIPS. SOLUTIONS

About NADO's Mission

- Strengthen local governments, communities and economies through the regional strategies, partnerships and solutions of the nation's regional development organizations

Advocacy | Education | Networking | Research

Regional Councils and Regional Development Organizations

Regional Council/Regional Development Organization

Source: National Association of Development Organizations, Regional Councils, August 13, 2010; Survey Data Results, January 12, 2011.

This map was created by the Center for Applied Research and Environmental Systems (CARES) in March 2011.

NADO Focus Areas

- ▶ **Infrastructure assets** including advanced broadband
- ▶ **Access to capital** and business expertise
- ▶ **Workforce** readiness
- ▶ **Quality of place** (i.e. Do knowledge workers want to live within your region?)

These are the minimum requirements for the game of economic development. But, they do NOT guarantee success or long-term economic sustainability...

Federal Policy Issues

- ▶ **Role of federal government** in economic development
- ▶ **Federalism** divide among federal, state and local govts.
- ▶ **One America policy**
 - Urban vs. Rural / Distressed vs. Prosperous
- ▶ **Obama administration**
 - Regional innovation
 - Regional sustainable development
 - Interagency collaboration *including joint funding*
 - = *Quality of place to advance economic competitiveness*

Lessons Learned: Regional Innovation

- ▶ **Regional governance leadership**, not regional govt.
 - Public, private and nonprofit collaboration
- ▶ **Risk management**, especially political appetite for risk
- ▶ **Motivation, culture and ability** to start new ventures
- ▶ **Sustained, long-term public policy framework** that transcends elected official terms and short-term views

Lessons Learned: Regional Innovation

▶ Technical assistance

- Public, private and nonprofit **collaboration**
- **Working regionally** across political and sector boundaries
- **Data collection**, analysis and know-how
- **Sustaining coalitions** after the planning phase and
when the grant runs out!

Regional Innovation Performance Measurements

▶ Moving beyond just *jobs* in the current climate

- ◆ Wealth creation and retention
- ◆ Community and institutional knowledge
- ◆ Net gains in household incomes and purchasing power

▶ Regional resiliency

- ◆ Infrastructure, economic and social
- ◆ Preparing for resiliency threats *before the shock*

GE Global Innovation Barometer

- ▶ **Innovation is the main driver of prosperity, competitiveness and job creation** – *innovation and competitiveness are more connected than ever before*
- ▶ **New paradigm** that engenders collaboration between several partners, values the creative power of smaller organizations and individuals, and tailors solutions to meet local needs

GE Global Innovation Barometer, January 18, 2012

Since starting the Blueprint project in 2002, the Sacramento region has taken a new approach to addressing transportation, land use, and air quality issues. The Rural-Urban Connections Strategy (RUCS) is a look at the region's growth and sustainability objectives from a rural perspective. In the same way that Blueprint is an economic development strategy for urban areas, the RUCS project is an economic and environmental sustainability strategy for rural areas.

FACTSHEET

Rural-Urban Connections Strategy

What is RUCS?

Since starting the Blueprint project in 2002, the Sacramento region has taken a new approach to addressing transportation, land use and air quality issues. Building on Blueprint, the Rural-Urban Connections

Strategy (RUCS) looks at the region's growth and sustainability objectives from a rural perspective. In the same way that Blueprint is an economic development strategy for urban areas, this project will be an economic and environmental sustainability strategy for rural areas.

Working Groups

SACOG is assembling working groups around core topic areas to help further understand what is currently happening around our region, address rural challenges and cultivate our unique opportunities. Through the working group process, SACOG is working directly with rural stakeholders, citizens, businesses, and public agencies to form strategies that enhance agriculture and rural economies, resource conservation, recreation, quality of life, and regional sustainability. This work will broaden the region's understanding of how land use and transportation investments affect rural areas.

Current Status

The Rural-Urban Connections Strategy has been moving forward in its second year of work. With input received at workshops, staff has developed three working papers in the topic areas of land use, transportation, and local markets. The draft papers are available for review and comments at www.sacog.org/rucs/wiki. Staff is currently collecting more input in all three topic areas through electronic surveys and upcoming workshops.

RUCS Tours

Agricultural tours are being conducted in each county of the region to learn about unique agricultural lands across our region. Slides and video interviews from the tours are available at www.sacog.org/rucs/tours/.

Five Areas of Review

The Rural-Urban Connections Strategy is focusing on these topic areas:

- **Land Use and Conservation:** Policies and Plans That Shape Rural Areas
- **The Infrastructure of Agriculture:** Challenges to the Production Process
- **Economic Opportunities:** New Ways to Grow Revenue
- **Forest Management:** Building Up Economic and Environmental Value
- **Regulations:** Navigating Federal and State Environmental Guidelines

RURAL CDFIS ATTRACT IMPACT INVESTMENTS

Our Mission:

Improve rural livelihoods with a systems approach to development that creates multiple forms of wealth that are owned and controlled locally. This wealth creation approach:

FOCUSES ON PLACE: Respects, builds on and advances the work people are already doing.

INCENTIVIZES COLLABORATION: Breaks out of rural isolation by building regional collaborations and tapping market demand.

CREATES MULTIPLE FORMS OF WEALTH: Builds many forms of capital - knowledge, resilient natural resources, social networks, and more.

EMPHASIZES LOCAL OWNERSHIP: Enhances the livelihoods of low-wealth people and places by building wealth that is owned and controlled locally.

WEALTH CREATION IN PRACTICE

CAN IS TAKING THE WEALTH CREATION APPROACH AND RUNNING WITH IT

The Central Appalachian Network is using the wealth creation framework as a lens for refocusing everything they do in building a healthy food system, write Katy Allen and Thomas Watson. It helps network members speak the same language. And it offers effective tools.

The Wealth Creation Approach

Four Principles of Wealth Creation

Creating Multiple Forms of Wealth

Value Chain Development

Impact Assessment

Wealth Creation in Action

Four Principles of Wealth Creation

1. *Focus on place.*
2. *Incentivize collaboration.*
3. *Create multiple forms of wealth.*
4. *Emphasize local ownership.*

The principles underlying the wealth creation approach are simple. Respect people and their places. Help people collaborate and tap new markets based on shared values. Build many kinds of wealth so everyone benefits. Keep wealth local.

1. Focus on place: "There isn't one way to do rural development," says Deb Markley of the [Center for Rural Entrepreneurship](#), who is the coordinator of the Resource Team for the WCRC initiative. Development will look different in Mississippi, Appalachia, or rural Kansas. "You start where people are and help them get to where they want to be," she says.

Place-based development means recognizing the assets inherent in a particular place – and respecting and building on the work people are already doing there. It means recognizing the cultural and political challenges of that place, and helping people build the capacity to overcome those challenges. In poor areas, it means connecting people to new ideas, markets, and partners in the mainstream economy for mutual benefit.

In some areas of Appalachia, for example, "the coal companies own everything, and there are consequences if you speak out in public," says Mikki Sager, vice president of The Conservation Fund and a member of the WCRC Resource Team. In the South, racial discrimination has

It's not about development done to communities, but development by and for communities.

Building Resilience into America's Regional Economies
RIAN and the community of Venture Development Organizations (VDOs) are transforming regions across the United States through strategic investments in innovation, entrepreneurship, and technology - one company at a time. Repeat hundreds of times over - you're this site to learn more about VDOs, find examples of their client successes, join the discussion for improving regional economic development, and bring new thinking, new practices to your own economy.

The nation's network of Venture Development Organizations (VDOs) turning innovations into companies with jobs to drive America's economy - SMARTER, FASTER, FORWARD

Our future prosperity requires innovation

Venture Development Organizations (VDOs) sharing best practices
The Regional Innovation Acceleration Network supports the community of existing and emerging VDOs around the country by providing the means for year-to-year sharing of information and best-practice practices and helping to identify funding opportunities for VDOs, and provide tools to help regions approach the creation of their own VDO.

A VDO is a business-driven, public or nonprofit organization that promotes regional growth by providing a flexible portfolio of services, including: assisting in the creation of high-growth companies; providing expert business assistance to those companies; facilitating or making direct financial investments; and, speeding the commercialization of technology.
